Michelle N

Use Cases:

Use Case Name: Login

Primary Actor: Customers & Tellers

Pre-Conditions: User has an existing account and is on the UI for logging in

Post-Conditions: User is logged into the account that corresponds to the given username:password and prompts them the correct dashboard for their account type

Basic Flow or Main Scenario: 1 User enters username and password into the UI → 2 UI sends that information to the server → 3 Server checks and verifies the credentials → 4 Upon successful verification user is redirected to the UI dashboard that corresponds to their account

Extensions or Alternate Flows: 1 User enters username and password into the UI → 2 UI sends inputted information to the server → 3 Server checks and invalidates credentials → 4 Server sends back unsuccessful login message to UI → UI displays message for user

Use Case Name: Deposit Transaction

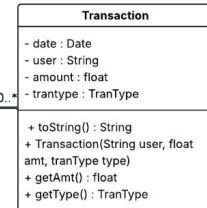

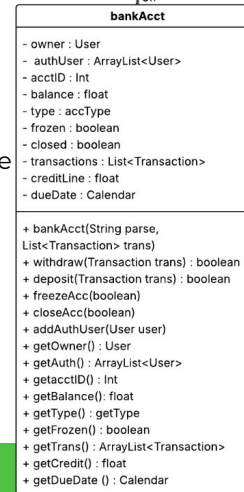

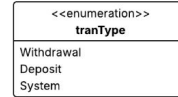

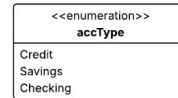

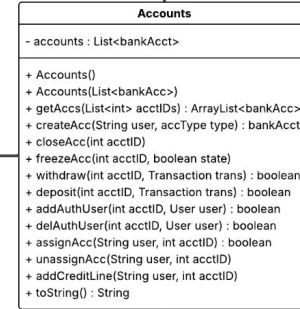

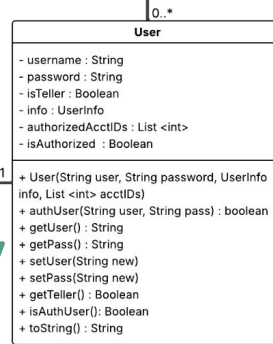

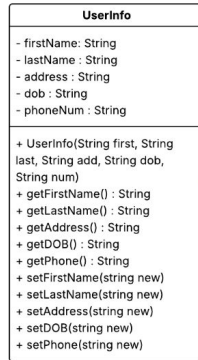

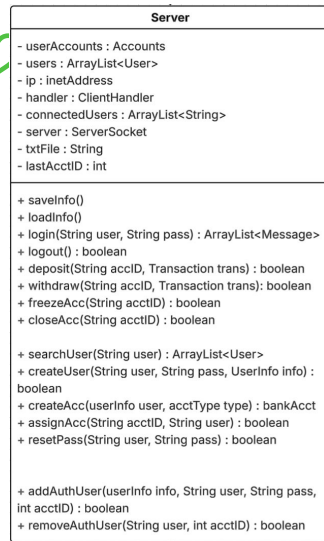

Primary Actor: Customer & Teller

Pre-Conditions: Customer must have an existing account to deposit to. If the customer is depositing less than \$1 or cents are included with the dollar amount it must be with a teller.

Post-Conditions: Transaction is logged and viewable from both ends of the teller and customer. The current account balance reflects that the transaction was indeed made.

Basic Flow or Main Scenario: 1 Customer logs into account through UI → 2 Upon successful login user is redirected to customer UI → 3 From the customer UI user initiates command with amount to deposit funds to account → 4 The funds of said deposit amount are added to the users account balance → 5 The transaction is logged and viewable for the customer and teller as needed
